Authentication Server Release Notes

VERSION 2.6.2

1. Introduction

This document describes the changes and enhancements to the FireID Authentication Server Version 2.6.2.

2. New Features

2.1 SOAP API Configuration

Issue	Area	Subject
US916	SOAP API	SOAP API Configuration
<p>The FireID Authentication Server now contains a second SOAP API - SOAP API V2. Both the original SOAP API (V1) and the new one (V2) can be configured to the following states in the authentication server web interface:</p> <ul style="list-style-type: none"> • Disabled • Accessible with Password authentication • Accessible with x.509 Certificate authentication <p>For further information on the SOAP API V2, please refer to the following documents: Authentication Server API V2 Description v2.6.2.pdf & Authentication Server API-V2 Example SOAP Client Manual v2.6.2.pdf.</p>		

2.2 User Management: Simplified User Search Facility

Issue	Area	Subject
US1279 & US1280	User Management	Simplified User Search Facility
<p>The Search facility in the User Management tab has been simplified, and now features a single entry field for searching on various parameters. This single entry field replaces the five entry fields previously present and thus provides a cleaner and simpler user interface.</p>		

3. Known Issues

FireID Authentication Servers versions 2.1.x are unable to upgrade to this version. Should you need to upgrade to v2.6.2, please contact FireID support via email: support@fireid.com.
