2.4 PROVISIONING NOTIFICATION	2
3. KNOWN ISSUES	2

Authentication Server Release Notes

VERSION 2.6

1. Introduction

This document describes the changes and enhancements to the FireID Authentication Server Version 2.6.

2. New Features

2.1 Hardware OATH Token Integration

Issue	Area	Subject
US103	Authentication	Hardware OATH Token Integration

The authentication server now supports OATH-compliant hardware tokens. This functionality allows authentication server administrators to choose whether to deploy a soft or hardware token to end users.

2.2 SOAP API ListUsers Functionality

Issue	Area	Subject
US909	SOAP API	SOAP API ListUsers Functionality

The authentication server SOAP API now includes the ListUsers functionality. This allows systems administrators to query the authentication server via the SOAP API to obtain the number of users and a list of their usernames. Furthermore, this functionality also supports wildcard username searches.

2.3 RADIUS Attribute Handling

Issue	Area	Subject
US1132	RADIUS	RADIUS Attribute Handling

The authentication server RADIUS server now features improved attribute handling. This allows Systems Administrators to specify additional RADIUS attributes via the web interface.

2.4 Provisioning Notification

Issue	Area	Subject
US1140	User Interface	Provisioning Notification
The authentication server user interface now features improved notification when users are provisioned.		

3. Known Issues

The JDBC user import facility does not work in this version of the Authentication Server. Kindly contact FireID support in order to setup a database user import.
